

50 LinkedIn Post Ideas

for Energy Leaders

10 ideas across 5 content pillars.

Pick one. Write it in 20 minutes. Publish it today.

YOUR 5 PILLARS

- Industry Insight
- Myth Busting
- Frameworks & How I Think
- Career & Leadership
- What I'm Building

How to Use This Guide

1 Pick a pillar.

Each section maps to a content territory your audience cares about. Start with the one closest to your daily work.

2 Pick an idea.

Each idea includes a prompt and a coaching note. The prompt gives you the angle. The note tells you how to make it land.

3 Fill in your expertise.

The brackets are where your specific knowledge goes. Replace [your market] with "Texas ERCOT." Replace [common assumption] with "baseload is dead." The specificity is what makes it yours.

4 Write it in 20 minutes.

Don't polish. Don't optimize. Write the way you'd explain it to a smart colleague over coffee. The best LinkedIn posts sound like a person, not a press release.

5 Publish and rotate.

Post from a different pillar each time. This keeps your feed varied and your audience engaged across all your themes.

Don't have content pillars yet?

Use our free Content Pillar Worksheet to define yours in 10 minutes.

Industry Insight

This is the pillar that builds credibility fastest. Your audience follows you because you see things they don't. These posts signal that you're paying attention at a level most people can't match.

1. 3 things I'm watching in [your market] this quarter

Replace the bracket with your specific sector. Be concrete. "3 things I'm watching in Texas grid reliability this quarter" hits harder than "trends in energy."

2. The regulatory change nobody is talking about yet

Name the specific regulation, the agency, and why it matters. The word "nobody" does heavy lifting in the hook.

3. What I learned sitting in on a [hearing/conference/meeting] that didn't make the news

First-person observation from an event your audience wasn't at. This is content only you can write.

4. The number that changed how I think about [topic in your space]

Lead with one specific data point. Explain why it surprised you and what it means for your audience.

5. Why [major industry trend] is being misread by most people in our space

Take a consensus view and explain what the consensus is getting wrong. Be specific about who and why.

6. The question I keep getting from [clients/partners/board members] this month

Reveals real-time market anxiety. Your audience sees themselves in the question.

7. A breakdown of [recent event/ruling/announcement] and what it actually means

Translate a headline into practical implications. The value is in the "what it actually means" part.

8. The most important chart in energy right now (and what most people miss when they look at it)

Share a real chart or data visualization. Add the insight layer that makes it useful.

9. What [country/state/utility] just did that the rest of the industry should be watching

Geographic specificity wins. Name the place, name the action, explain the ripple effect.

10. The conversation happening behind closed doors at [conference/summit] that matters more than the keynotes

Hallway insights beat stage insights every time. This signals insider access.

Myth Busting

This is the pillar that gets shared. When you challenge something people believe but haven't examined, you trigger the kind of debate that drives engagement. These posts position you as someone who thinks critically, not someone who repeats talking points.

11. No, [common assumption] doesn't work that way. Here's why.

Pick the thing everyone in your space says that you know is wrong. Be direct. "No" as an opening word is a pattern interrupt.

12. The most expensive mistake I see [your audience] make

Specific to their decisions, not generic. "The most expensive mistake I see procurement directors make in PPA negotiations" is a post. "Common mistakes in energy" is not.

13. Everyone says [conventional wisdom]. Here's what actually happens.

Set up the conventional wisdom clearly so even people who believe it nod along. Then show the gap.

14. "[Common phrase in your industry]" needs to stop. Here's what we should say instead.

Attack the language, not the people. This works because jargon masks sloppy thinking.

15. I used to believe [thing]. Then I saw [evidence]. Now I think [updated view].

The vulnerability of "I was wrong" paired with the credibility of "here's the data that changed my mind."

16. 3 things the media gets wrong about [your sector] every time they cover it

Energy leaders love this because they live the frustration. Name specific framing errors.

17. [Technology/approach] won't save us. Here's what will.

Not cynicism. Redirection. Name the overhyped thing, then name the underappreciated thing.

18. The hidden cost of [common practice] that nobody puts in the spreadsheet

Reveal the second-order effect. The cost that shows up 18 months later. Your audience will forward this to their CFO.

19. Why the smartest person in the room is usually the worst at [specific task]

The paradox hook. Technical expertise doesn't automatically translate to communication, leadership, or strategy.

20. Stop telling [your audience] to [common advice]. It doesn't work and here's the data.

Attack bad advice with evidence. This positions you as someone who has tested what others only recommend.

Frameworks & How I Think

This is the pillar that converts followers into clients. When you show how you evaluate, decide, and structure your work, people see the operating system behind your expertise. Frameworks are the most screenshot-worthy, save-worthy content on LinkedIn.

21. My [number]-step filter for evaluating [key decision in your space]

Keep it to 3-5 steps. Each step should be a clear yes/no or a specific question to ask. Make it usable.

22. How I explain [complex topic] to a board member in 60 seconds

The constraint forces clarity. Your audience wants to steal this for their own board conversations.

23. The checklist I use before recommending [specific action]

Checklists get saved. Make it specific enough to be useful but general enough to apply across contexts.

24. How I evaluate whether [opportunity/technology/partnership] is worth pursuing

Reveal your decision criteria. This is your professional judgment made visible.

25. The 2x2 matrix I use to prioritize [decisions in your domain]

Two axes, four quadrants. Label each quadrant. This is the format that gets screenshot and shared the most.

26. Before vs. after: how I restructured [process/approach] and what changed

Show the old way and the new way side by side. Include the result. Proof makes frameworks credible.

27. The one question I ask in every [meeting/review/evaluation] that changes the conversation

One question is the constraint. It has to be good enough to stand alone. "What would have to be true for this to fail?"

28. How I think about [topic] differently than most people in my field

Not contrarian for the sake of it. Explain the lens you use and why it produces different conclusions.

29. My template for [specific deliverable] and why each section exists

Show the structure of something you actually use. Explain the reasoning behind each component.

30. The mental model that changed how I approach [area of your work]

Name the model. Explain where you learned it. Show how it applies to your specific domain.

Career & Leadership

This is the pillar that builds the human connection. Your audience wants to know what you've learned, what you've survived, and what you see coming. These posts show the person behind the expertise and they tend to get the highest engagement because they're relatable across roles.

31. The skill that matters most in energy right now isn't technical

Name the skill. Communication, systems thinking, stakeholder management, narrative building. Make the case.

32. What I wish someone told me 10 years ago about this industry

Hindsight insight. Be honest about what you didn't know and what it cost you.

33. Why I stopped [common practice] and what I do instead

The "I stopped" hook signals that you've evolved. People want to know why.

34. The best piece of advice I've received in my career (and when I finally understood it)

The delay between receiving advice and understanding it is the interesting part. That's where the story lives.

35. What hiring managers in energy actually look for (it's not what you think)

If you've hired people, you have this insight. Share what actually mattered in your best hires.

36. The meeting that changed how I lead

One specific moment. What happened, what you realized, what changed. Keep it tight.

37. 3 books that shaped how I think about [your domain]

Not a generic reading list. Explain specifically how each book changed your approach. One sentence per book.

38. The hardest decision I made this year and what I learned from it

Vulnerability with insight. Not therapy. The decision, the tradeoff, and the lesson.

39. Why I'm more optimistic about [your sector] than most people right now

Optimism backed by specifics is rare and valuable. Name exactly what you're seeing.

40. The career move that looked like a step backward but wasn't

Nonlinear career paths resonate because most real careers are nonlinear.

What I'm Building

This is the pillar that creates momentum. When your audience sees what you're working on, they feel invested in your trajectory. These posts work for founders, project leads, team managers, and anyone building something that matters. The key: show the work, not just the wins.

41. Here's what we're working on and why it matters

A clear, honest update. Name the project, the problem it solves, and where you are in the process.

42. The problem we set out to solve and what we've learned so far

Origin story plus current state. People follow journeys, not announcements.

43. A behind-the-scenes look at how we [specific operational detail]

Process transparency. Show the system, not just the output. This builds trust.

44. We tried [approach]. It didn't work. Here's what we're doing instead.

Failure stories with redirection get more engagement than success stories. They signal honesty.

45. The team behind [project/initiative] and why they're the right people for this

Spotlight others. Tag them. This builds internal culture and external credibility simultaneously.

46. What our [clients/partners/members] are telling us right now

Aggregate insight without naming names. "We're hearing X from Y type of organization." Market intelligence framing.

47. Why we chose [approach A] over [approach B] for [specific project]

Decision transparency. Show the tradeoffs you considered. This signals rigor.

48. One year ago we started [initiative]. Here's where it stands.

Anniversary posts with honest assessment. Include what worked, what didn't, and what's next.

49. The infrastructure nobody sees that makes [your output] possible

Behind-the-curtain post. The systems, processes, and team structure that enable what your audience sees.

50. What I'm most excited about right now (and why it matters for our industry)

Enthusiasm backed by substance. Name the specific thing and connect it to a broader trend.

Ideas get you started.

A system keeps you going.

You now have 50 angles you can publish from.
The hard part isn't knowing what to say.
It's showing up consistently, with the right positioning,
to the right audience, in a format that compounds.
